To Whom It May Concern,

Ed Jaworski was demonstrating the Proband Direct Mesa+ and Protec product to me today, when I received a phone call advising me that one of our Kitchen Staff had sustained a deep cut to his right index finger while cutting steaks. It was the opportune time to see Mesa+ and Protec in use.

Mr. Jaworski was able to first hand demonstrate the durability and simplicity of use of the products to us on our injured employee. Once applied the bleeding stopped immediately and the employee was able to return to work preventing a trip to the Emergency Department.

Having seen firsthand the simplicity of application of the product, the ability to stop bleeding and enabling the injured worker to return to his station within minutes following the injury, I highly recommend the product to any company that deals with sharp instruments that can result in this type of injury.

Sincerely Yours,

Candi Kubiak
Manager, Human Resources
Health & Safety Compliance Officer
