February 24, 2004

We have been using Mesa and Protec for several years and have found it to be very good in the machine shop.

We had an injury, a finger that had a little piece cut off the corner, we tried using a spray that was suppose to stop the bleeding. This did not work. We used a product called Mesa and this stopped the bleeding.

Protec allows the worker to go right back to work. This product protects the finger from oil and dirt.
